PROFILE

I'm a 4th-year computer engineering student at Zonguldak Bülent Ecevit University. Apart from my department courses, I'm developing myself by creating .Net Core, API, and web projects

----

WORK EXPERIENCE

Internship

DigiGarson   June 2023-July 2023

- I developed and delivered an alternative food ordering project using React and MongoDB

DigiGarson   August 2023-September 2023

- I have developed a personal website using C# with API and UI layering. Additionally, during my internship, I successfully completed the ASP.NET Core training conducted in collaboration with BTK Academy and Ahlatcı Holding, earning certification.

PROJECTS

Personal Website

- I designed a website with an admin panel by combining it with an API using the MVC structure. I thought this site would be both a way to test myself and a means to introduce myself to others.

RentACar Backend

- I completed the backend part of a car rental website using .NET Entity Framework in accordance with the enterprise architecture and adhering to SOLID principles. Within this backend, along with the Aspect-Oriented Programming (AOP) structure, I developed services that could be utilized in the infrastructure of various e-commerce sites.
